I am writing to apply for the Business Systems & AI Automation Manager role at feld.energy GmbH. Your mission to combine agriculture with renewable energy through Agri-PV solutions is a compelling intersection of sustainability and technology, and I am interested in contributing to that vision.

My work has centered on building systems that connect data, automation, and AI into practical tools. I have developed full-stack applications using Laravel, Node.js, and Next.js, and integrated AI capabilities through OpenAI APIs and LLM-based assistants. For example, I built an AI-powered financial platform where voice inputs are transcribed via AWS Transcribe, processed by a trained AI model, and used to generate PDF term sheets automatically. This required designing APIs, managing data quality across services, and ensuring consistent data flows between frontend, backend, and external systems.

A relevant example is my work on an AI-powered real estate platform. I implemented role-based authentication, subscription plans, and Stripe payment integration while training multiple AI assistants using GPT models and integrating Replicate API for image processing. The system automated repetitive tasks like property analysis and document generation, reducing manual effort for users. This experience directly maps to building automated workflows, integrating AI agents, and maintaining a reliable data infrastructure.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in AI automation and systems integration can support feld.energy’s operational goals.

Sincerely,

Md Shahanur Islam Shagor
