I am writing to apply for the IT-Systemadministrator / First-Level-Support position at JobAtlas. The role of being the first point of contact for IT questions and ensuring stable, secure operations aligns with my technical foundation and practical experience in system administration.

Through hands-on project development, I have built and maintained systems using Linux, Docker, Nginx, and Apache. I am comfortable managing servers, monitoring system health, and ensuring reliable network and data backup operations. My experience with user account management and access control in web applications translates directly to maintaining secure and organized IT environments.

In previous work, I deployed and maintained applications on Linux servers, configured CI/CD pipelines, and handled routine troubleshooting and performance monitoring. I have worked with tools like Prometheus and Grafana for system observability and have practical experience with Docker and containerized deployments. These skills support the responsibilities of keeping server, network, and data backup systems running reliably.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background can contribute to the IT team in Werne.

Sincerely,

Md Shahanur Islam Shagor
