I am writing to apply for the Junior PR Manager position at getpress. Your approach to building a PR company that is outcome-driven, AI-first, and focused on individual media work rather than mass distribution stands out. The idea of combining automation with genuine human relationships is something I find genuinely compelling.

Through my work as a Full-Stack and AI Engineer, I have built AI-powered systems that integrate LLMs, automate workflows, and process data intelligently. I have developed AI assistants using OpenAI, implemented real-time features, and designed systems that handle research and content generation. I understand how to work with AI tools to save time on repetitive tasks and invest that time in what matters: substance, relationships, and creativity.

One area that particularly interests me is how you use AI for research, pitch preparation, and topic scouting. In my projects, I have built systems that automate data processing and content generation, giving teams more time for strategic thinking. I am comfortable working with AI stacks and eager to contribute to and help shape your internal system.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in AI-driven systems and hands-on problem-solving can contribute to getpress.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
