I am writing to apply for the Senior Platform Engineer â Cloud & ML Platform role at Quantum-Systems GmbH. Your work on intelligent unmanned systems and the cloud-native infrastructure that powers AI and autonomy at global scale is directly relevant to the kind of engineering challenges I enjoy solving.

Through hands-on project development, I have built and deployed containerized applications using Docker and Kubernetes, managed Linux-based servers with Nginx, and set up CI/CD pipelines for automated deployments. I have also worked with AWS for cloud infrastructure, including EC2, S3, and SES, and used monitoring tools like Prometheus and Grafana to track system health and performance. These experiences have given me a solid foundation in operating and improving platform infrastructure for production workloads.

One area that particularly interests me is enabling AI and data teams to run scalable workloads reliably. In a recent project, I developed a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker, which streamed live system metrics to the browser and supported role-based access control. This required designing a scalable architecture, managing containerized services, and ensuring observability through logging and alerting. The project reinforced my ability to build platform components that support data-intensive operations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in cloud infrastructure, containerization, and platform engineering can contribute to the Quantum-Systems team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
