I am writing to apply for the Werkstudent:in / Praktikant:in (m/w/d) Product Testing & AI Automation position at Placed Technologies GmbH. Your focus on building AI software for recruitment teams and turning candidate profiles into actionable sales opportunities is a practical and interesting application of AI technology.

Through hands-on project development, I have built AI-powered systems that integrate LLM-based assistants, structured outputs, and automated workflows. In my AI-powered financial app project, I developed backend APIs using Express, TypeScript, and OpenAI, trained custom AI assistants, and implemented voice-to-text processing with AWS Transcribe. I also built automation for generating PDF term sheets and sending them via AWS SES. This experience has given me a solid understanding of how to test AI outputs for consistency, data logic, and practical usability.

One area that particularly interests me is building internal automations to improve testing and operational workflows. I have experience working with APIs, webhooks, and browser automation tools. In my real estate platform project, I integrated Replicate API for image processing and Stripe for payments, and set up Cron job scheduling for automated tasks. I am comfortable identifying repetitive tasks and building automations that save time and reduce errors.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my testing mindset and automation skills to your team. I have attached my CV for your review and look forward to the possibility of contributing to PLACED’s product quality and AI workflows.

Sincerely,

Md Shahanur Islam Shagor
