I am writing to apply for the Head of Public Understanding role at NOPE. Your mission to build open-source safety layers for AI relationships is both timely and necessary. I share your view that the conversation about what AI is doing to people needs to happen in the right language and in the right places.

As a software engineer with hands-on experience building AI-powered systems, I understand how large language models work and where they fall short. I have developed applications using OpenAI and Replicate APIs, trained custom AI assistants, and worked on privacy-preserving frameworks for autonomous vehicle communication. This technical grounding gives me a clear-eyed view of what these systems can and cannot do, and what real safety looks like under the hood.

One area that particularly interests me is making complex ideas legible to people who do not already live in the technical details. In my research on secure UAV systems and blockchain-based privacy frameworks, I have had to communicate nuanced security concepts to diverse audiences. I am comfortable writing for social channels, speaking at events, and engaging with policymakers and researchers. I can take NOPE's research and trackers and turn them into content that people actually read, debate, and act on.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how I can help NOPE build a public voice that makes AI safety impossible to ignore.
