I am writing to apply for the Biology Research Expert consulting opportunity at 24-MAG. This role's focus on structured scientific review, experimental workflow assessment, and evidence-based evaluation aligns well with my technical background in AI and autonomous systems.

Through my research and development work, I have built systems that require rigorous evaluation of experimental outputs, data interpretation, and technical documentation. For example, I developed WVAB (Wireless Vision-Aid for the Blind), a real-time assistive system that uses YOLOv8n-based object detection and sensor fusion. This involved reviewing experimental scenarios, evaluating model outputs against ground truth data, and preparing structured written analyses of system performance.

In my professional experience as a Web Developer, I regularly reviewed technical documentation, evaluated outputs against source materials, and prepared clear written explanations for complex technical conclusions. These skills in structured review, attention to detail, and evidence-based reasoning transfer directly to the biology research evaluation workflows described in this opportunity.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in structured evaluation and technical analysis can contribute to your biology research projects.

Sincerely,

Md Shahanur Islam Shagor
