I am writing to apply for the Senior Quality Engineer role at LawnStarter. Your platform serves a large, active marketplace for lawn care and home services, and the engineering team is rebuilding the stack with Laravel and React while integrating AI-powered features. That combination of scale, modern tooling, and proactive quality ownership is exactly the kind of environment where I work best.

Through my professional experience as a Web Developer, I have worked extensively with PHP (Laravel) and React across multiple production applications. I have built and maintained RESTful APIs, implemented authentication and role-based access control, and optimized database queries in MySQL. I am comfortable reading and writing code across the full stack, which allows me to test meaningfully at every layer, not just the UI.

What stands out to me about this role is the emphasis on automation ownership and process improvement. In previous work, I have written automated tests using Jest and PHPUnit, set up CI/CD pipelines, and deployed applications with Docker and Nginx on Linux servers. I approach quality the same way your team does: find the gap, automate the fix, and make sure it stays closed. I also actively use AI tools in my engineering workflow to reduce repetitive work and catch edge cases earlier.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to raising the quality ceiling at LawnStarter.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
