I am writing to apply for the Senior Quality Engineer role at LawnStarter. Your platform's scale, the cross-functional nature of this position, and the emphasis on proactive quality ownership align well with how I approach software engineering.

LawnStarter operates a PHP (Laravel) and React/React Native stack, and you are actively using AI tools like Claude Code as a standard part of your workflow. In my professional experience, I have built and maintained full-stack web applications using Laravel and Next.js, and I regularly integrate AI tools into my development process for code generation, debugging, and test writing. I am comfortable reading and writing code across the stack, writing SQL queries, and debugging issues that span frontend, backend, and infrastructure layers.

One area that particularly interests me is the ownership of automated test coverage and the bug process. In previous work, I have designed and implemented RESTful APIs, built real-time features with WebSockets, and deployed applications using Docker and CI/CD pipelines. I approach quality the same way I approach development: by building systems that catch problems early, automating repetitive checks, and continuously refining processes rather than just reacting to failures.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to raising the quality ceiling at LawnStarter.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
