I am writing to apply for the Senior Quality Engineer role at LawnStarter. Your focus on proactive quality, automation ownership, and cross-functional partnership aligns directly with how I approach software delivery.

Your stack is PHP (Laravel) and React, and you're scaling into new service verticals with AI-powered features. I have 4 years of professional full-stack development experience with Laravel and React, and I've built automated test coverage using Jest and PHPUnit. I don't just write tests; I design test strategies that keep coverage strong as the product evolves.

One area that particularly interests me is your emphasis on using AI tools like Claude Code to improve quality operations. I already integrate AI into my development workflow for writing test code, debugging, and automating repetitive tasks. I'm comfortable with browser MCPs and agent workflows, and I actively explore new tools to catch coverage gaps before they reach production.

In my professional experience, I've worked across frontend, backend, and deployment, which gives me the technical depth to debug issues across the full stack. I've also collaborated directly with product and design teams to surface risks early and define what "done" means. I'm direct, I speak plainly about what I find, and I push back when something isn't ready to ship.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I've attached my CV for your review and would welcome the opportunity to discuss how I can help raise the quality ceiling at LawnStarter.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
