I am writing to apply for the Senior Quality Engineer (Campinas) role at LawnStarter. Your platform is scaling into new service verticals and AI-powered features, and quality needs to stay proactive rather than reactive. That approach resonates with how I work.

Through my professional experience as a Web Developer, I have built and maintained full-stack applications using PHP (Laravel) and React/Next.js. I am comfortable reading and writing code across the stack, writing meaningful SQL queries, and debugging issues that span frontend, backend, and database layers. This technical breadth allows me to understand how features work end to end and where quality gaps are likely to appear.

One area that particularly interests me is automation ownership. In previous work, I have designed and implemented real-time monitoring systems using Socket.IO and built test infrastructure for server health dashboards. I approach quality the same way: if a problem can be caught automatically, it should be. I am comfortable with CI/CD pipelines, Docker-based deployments, and Linux server management, which gives me the context to build automation that fits into the team's actual workflow.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how I can contribute to raising the quality ceiling at LawnStarter.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
