I am writing to apply for the Software Engineer, Data Infrastructure & Acquisition role at Speechify. Speechify's mission to remove reading barriers through AI-powered text-to-speech technology is genuinely impactful, and the opportunity to contribute to the data infrastructure that powers next-generation models aligns directly with my engineering experience.

My background combines software engineering with infrastructure and automation. I have professional experience working with Docker, Linux environments, and cloud providers including Google Cloud and AWS. I am comfortable with bash scripting and Python for automating workflows and processing data. I have deployed and maintained production applications on Linux servers using Nginx, Apache, and Docker, with CI/CD pipelines for reliable releases.

One area that particularly interests me is building and extending ingestion pipelines. In previous work, I developed systems that involved real-time data streaming, API integration, and database optimization. I have worked with tools like Socket.IO for live data delivery and have experience managing cloud infrastructure for scalable applications. I am comfortable operating in environments where infrastructure, engineering, and research work closely together.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how my background in software engineering and infrastructure can support Speechify's data acquisition and model training operations.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
