I am writing to apply for the Senior Software Engineer, Core Experiences role at Speechify. Your mission to make information accessible through audio is something I find genuinely compelling, and I appreciate the focus on building foundational services that directly improve user experience across platforms.

My technical background is rooted in full-stack development with an emphasis on backend systems, APIs, and real-time communication. I have worked extensively with Node.js, TypeScript, and Express to build scalable services, and I have experience deploying cloud functions and managing infrastructure on AWS and Google Cloud. I also have familiarity with Kotlin and have worked with cross-platform development tools, which connects to your preferred tech stack.

A relevant example is a real-time server health monitoring system I built, which involved designing a Node.js and Express backend with Socket.IO for live data streaming, JWT-based authentication, and a fully Dockerized deployment with Nginx. This project required systems thinking to optimize end-to-end performance and reliability, similar to the kind of work your Core Experiences team does with foundational services and SDKs.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience aligns with the needs of your team.

Sincerely,

Md Shahanur Islam Shagor
