I am writing to apply for the Senior Software Engineer, Core Experiences role at Speechify. Your mission to make information accessible through audio is genuinely impactful, and I appreciate the focus on building foundational services that directly improve user experience across platforms.

My background is in full-stack and backend engineering, with strong experience designing clear APIs and building scalable services. I have worked extensively with Node.js, Express, TypeScript, and Kotlin, and have deployed cloud functions and backend services on AWS and Google Cloud. I value simplicity in system design and understand the importance of end-to-end thinking when optimizing performance and reliability.

One area that particularly interests me is building cross-platform SDKs and foundational services. In previous work, I developed real-time communication systems using WebSocket and WebRTC, and built scalable backend architectures with role-based access control, database optimization, and secure authentication. I also have experience shipping cloud functions and lightweight backend jobs, which aligns directly with the responsibilities of this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident I can contribute to Speechify's Core Experiences Team and help build reliable, high-quality systems that serve millions of users. I have attached my CV for your review and welcome the opportunity to discuss how my experience aligns with your needs.

Sincerely,

Md Shahanur Islam Shagor
