I am writing to apply for the Software Engineer, Platform role at Speechify. Your mission to remove reading barriers through text-to-speech technology is something I find genuinely impactful, and the work your Platform team does building and maintaining backend services like payments, subscriptions, and external APIs is exactly the kind of engineering challenge I enjoy solving.

My professional experience centers on backend development with TypeScript and Node.js, which aligns directly with your required stack. Over the past few years, I have designed and maintained RESTful APIs for authentication, payment processing, and data management, ensuring they remain performant and scalable as user demands grow. I have also worked with cloud infrastructure on AWS and Google Cloud, deploying services that require reliability and uptime.

One area that particularly interests me is building internal and public APIs that other teams and products depend on. In previous work, I developed and maintained APIs for financial applications and real estate platforms, handling role-based access, subscription logic, and third-party integrations. These systems required careful attention to scalability, error handling, and clear documentation, which I understand is central to the Platform team's responsibilities at Speechify.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my backend engineering experience can contribute to Speechify's platform and product goals.

Sincerely,

Md Shahanur Islam Shagor
