I am writing to apply for the Senior Data Scientist role on the Community Data Team at Atolls. The idea of working on applied ML problems that directly shape how millions of users discover deals every day is exactly the kind of challenge I want to be part of.

Through hands-on project development, I have built and iterated ML models using Python and libraries like Pandas, NumPy, and Scikit-learn. One example is my Wireless Vision-Aid for the Blind project, where I trained a YOLOv8n object detection model, optimized it for real-time inference on edge hardware, and evaluated its performance using precision, recall, and latency metrics. That project taught me how to define what "good" looks like when there is no clear benchmark, and how to validate results honestly.

I am comfortable writing complex SQL queries and working with large datasets. In my full-stack development work, I have designed database schemas, written optimized queries with CTEs and window functions, and processed behavioral data across MySQL and PostgreSQL. I know how to translate raw data into actionable insights.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to the Community Data Team at Atolls.

Sincerely,

Md Shahanur Islam Shagor
