I am writing to apply for the Lead Cloud Fullstack Developer position at Pertemps ERP. The combination of cloud-native development, architectural responsibility, and hands-on technical work makes this role particularly interesting to me.

Through my professional experience as a Web Developer, I have built and delivered full-stack applications using modern JavaScript frameworks such as Next.js, React, and TypeScript, paired with Laravel on the backend. I have designed RESTful APIs, implemented authentication and role-based access control, and integrated payment gateways and third-party services into production systems.

One area that aligns well with this role is my work with cloud technologies and containerization. I have deployed applications on AWS (EC2, Amplify, S3), configured Nginx and Apache on Linux servers, and used Docker for containerized development and deployment. I have also worked with CI/CD pipelines to streamline releases and ensure application reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
