I am writing to apply for the Strategy & Operations Lead position at Cambrium. What Cambrium is doing engineering molecules with precision using an AI engine to create sustainable performance chemicals is genuinely interesting. The chance to work at the centre of a deep-tech company's strategic and operational engine, reporting directly to the CEO, is exactly the kind of high-ownership role I am looking for.

My professional background is in software engineering, but my work has always extended beyond pure technical delivery. I have consistently taken ownership of cross-functional projects, coordinated with stakeholders across teams, and built systems that required structured thinking and clear documentation. Whether it was designing a full-stack platform from scratch or managing deployment pipelines, I have learned to break down complex problems into actionable steps and drive them to completion.

One area that particularly interests me is the responsibility around strategic projects and investor relations. In my previous roles, I prepared materials for internal and external stakeholders, managed project timelines, and ensured high-quality follow-through on decisions. I am comfortable with quantitative analysis and have used data to inform product and business decisions. I also have experience coordinating with leadership teams to align priorities and track progress.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments. I am structured, detail-oriented, and comfortable with ambiguity. I do not wait to be told what to do.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
