I am writing to apply for the Paid Social Content Creator position at Ordio GmbH. Your mission to build an all-in-one platform for deskless workers is a genuinely interesting problem, and I appreciate that you are looking for someone to own the video identity from the ground up.

My background is in software engineering and AI, but I have consistently worked on projects that involve video processing, real-time streaming, and AI-powered content generation. Through my work on the Wireless Vision-Aid for the Blind (WVAB) project, I built a complete video pipeline using YOLOv8n-based object detection with ultra-low latency UDP streaming. This required me to think about frame rates, encoding, cutdowns, and real-time delivery across different formats, which maps directly to the production ownership you described.

I also have experience with AI-assisted workflows. In my AI-powered financial and real estate projects, I trained custom AI assistants using OpenAI models and integrated them with voice processing, image analysis, and automated document generation. I understand how to use AI tools to speed up creative iteration and testing, which aligns with your requirement for experience with AI-supported work.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my technical and creative background can contribute to building Ordio’s video presence.

Sincerely,

Md Shahanur Islam Shagor
