I am writing to apply for the Social Media Video Editor role at Adoreal. Your focus on using AI-assisted workflows to scale short-form video production across multiple practice brands is exactly the kind of challenge I want to be part of.

My background is in full-stack and AI engineering, but I have built systems that process video and image content at scale. One project that directly relates to this role is Wireless Vision-Aid for the Blind (WVAB), a real-time assistive system I developed using YOLOv8n-based object detection. The system processes live video frames locally, applies ultra-low latency streaming, and delivers audio feedback in real time. This required me to optimize for speed, accuracy, and output quality while working within hardware constraints.

In that project, I treated AI tools as part of my daily workflow rather than a novelty. I used Python for the detection pipeline, C++ for performance-critical components, and custom UDP streaming to minimize latency. The system runs fully offline, which taught me how to compress processing time without making the output feel generic or low quality.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident I can bring speed, consistency, and a practical AI-assisted workflow to your video production pipeline. I have attached my CV for your review and welcome the opportunity to discuss how I can contribute to Adoreal’s marketing team.

Sincerely,

Md Shahanur Islam Shagor
