I am writing to apply for the Associate Product Manager position at CareTalk Health. The opportunity to work in a remote, product-focused role within a health technology company aligns well with my background in building and delivering full-stack applications from concept to deployment.

Over the past four years, I have worked as a web developer where I was responsible for designing features, building APIs, and coordinating with stakeholders to ensure product goals were met. At Explo-IT, I worked closely with engineering teammates and business stakeholders to translate requirements into working features, manage timelines, and deliver production-ready systems. This experience has given me a practical understanding of how product decisions impact both development teams and end users.

One area that particularly interests me is the intersection of product thinking and technical execution. I have built systems that required balancing user experience, performance, and business logic. For example, I developed a multi-vendor e-commerce ecosystem using Laravel and Flutter that coordinated customers, sellers, and delivery agents within a single platform. This required careful planning of features, user roles, and workflows across multiple applications.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
