I am writing to apply for the Technical Support Engineer 2 position at DataBank. Your focus on delivering reliable, enterprise-class data center and managed services aligns with my experience in maintaining production systems and supporting complex infrastructure.

My technical background is rooted in Linux system administration, web server management, and scripting. I have worked extensively with Apache, Nginx, MySQL, and Docker in production environments. I am comfortable troubleshooting network connectivity issues at both the application and OS level, and I have practical experience with monitoring tools, CI/CD pipelines, and performance optimization.

In previous roles, I was responsible for deploying and maintaining web applications on Linux servers, configuring firewalls and load balancers, and ensuring system reliability through proactive monitoring. I have also written scripts in PHP and Python to automate routine tasks and improve operational efficiency. Troubleshooting web services such as Apache and resolving DNS, routing, and firewall issues have been a regular part of my workflow.

One area that particularly interests me is the opportunity to support and manage diverse client systems in a multi-data center environment. I have experience assisting customers with server management, documenting procedures, and collaborating with teams to maintain service level agreements. I am comfortable participating in on-call rotations and handling after-hours support when needed.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
