I am writing to apply for the Senior Java/Angular Fullstack Developer position at FastRocket GmbH. Your focus on modern cloud-based architectures, clean code, and scalable enterprise solutions aligns well with the kind of engineering work I value most.

My full-stack development experience is built around TypeScript-based frontend frameworks and robust backend systems. While my primary frontend expertise is with React and Next.js, I have a solid understanding of TypeScript and component-based architectures that transfer directly to Angular. On the backend side, I have worked extensively with Node.js and Express, building REST APIs, managing relational databases like MySQL and PostgreSQL, and implementing authentication, role-based access, and secure data handling.

In previous work, I have designed and deployed full-stack applications using Docker, Nginx, and AWS, with CI/CD pipelines for automated builds and deployments. I have also worked with Kubernetes and monitoring tools like Prometheus and Grafana. One area that particularly interests me is the optional integration of AI and GenAI services into applications, which I have practical experience with through projects involving OpenAI and Replicate APIs.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to FastRocket GmbH’s engineering team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
