I am writing to apply for the Senior SEA Manager (m/w/d) Paid Search & Strategy position at hurra.com. Your approach of combining performance marketing with proprietary technology development is particularly interesting, as it reflects my own focus on building data-driven, efficient systems.

My professional background is in software engineering, where I have spent over four years developing and optimizing full-stack web applications. This experience has given me a strong analytical foundation, particularly in areas like data tracking, performance optimization, and conversion-focused development. I am accustomed to thinking in terms of metrics, identifying bottlenecks, and implementing systematic improvements to achieve measurable results.

In my previous role as a Web Developer, I was responsible for optimizing application performance through Eloquent query tuning, caching strategies, and database indexing. I also built and integrated RESTful APIs and implemented real-time features. This technical discipline and focus on efficiency are directly applicable to managing complex search campaigns, where every optimization and data point contributes to the overall return on investment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I understand you also request a short video introduction, which I will prepare and send separately. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
