I am writing to apply for the Embedded-Softwareentwickler position at beratungsgruppe wirth + partner. Your work developing on-board electronics and display systems for rail and special-purpose vehicles is technically interesting, and I appreciate the focus on safety-critical embedded solutions.

Through research and development work, I have built embedded systems combining C++, Python, and Linux on platforms such as Raspberry Pi, ESP32, and NVIDIA Jetson Nano. One project involved developing a real-time object detection pipeline using YOLOv8n on a Raspberry Pi with an ESP32-CAM, where I implemented a custom UDP streaming protocol for low-latency communication and optimized inference for offline operation. This required close work with hardware interfaces, firmware logic, and system-level performance tuning.

In addition to C++ and Python, I have experience configuring and maintaining Linux-based systems, writing Bash scripts for automation, and developing validation tools for internal testing. I am comfortable working across the software-hardware boundary and enjoy building reliable, efficient systems that function well under real-world constraints.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my embedded systems experience aligns with your team’s needs.

Sincerely,

Md Shahanur Islam Shagor
