I am writing to apply for the Software Engineer (m/w/x) â Distributed Simulation & Interoperability position at K-tronik GmbH. The role focuses on developing and integrating components of distributed simulation systems, ensuring interoperability and consistent data processing across platforms. This aligns directly with my experience in building real-time, distributed systems and my interest in defense and security technologies.

Through research and development work, I have built systems that combine C++ and Python for real-time data processing, sensor integration, and low-latency communication. One area that particularly interests me is the design of interfaces between distributed components and ensuring reliable data flow across heterogeneous systems. My work on the Wireless Vision-Aid for the Blind project involved creating a UDP-based streaming protocol for ultra-low latency video transmission, which required careful attention to synchronization, packet handling, and real-time constraints.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my experience in distributed systems, real-time communication, and system integration to the team at K-tronik. I have attached my CV for your consideration and look forward to discussing how I can contribute to your projects.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
