I am writing to apply for the technical project manager position in security technology at wabcon. The role combines IT systems, project leadership, and technical solution development, which aligns with my engineering background and hands-on project experience.

Through my professional experience as a Web Developer, I have planned and delivered technical projects from concept to deployment. I designed system architectures, integrated third-party services, and coordinated with cross-functional teams to meet project milestones. This involved selecting appropriate technologies, managing dependencies, and ensuring reliable delivery within deadlines.

One area that particularly interests me is the integration of complex system architectures, including video, access control, and alarm systems. In previous work, I built real-time monitoring dashboards that tracked system health across multiple endpoints, using Socket.IO for live data streaming and Docker for containerized deployment. This required understanding both hardware interfaces and software communication protocols.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical project experience can contribute to wabcon’s security technology solutions.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
