I am writing to apply for the SPS-Programmierer position at SRT Echterhoff GmbH. Your company's long-standing expertise in planning and implementing control systems for machine and plant engineering is impressive, and I am interested in contributing to your team.

Through my work in embedded systems and automation, I have developed practical experience in programming and adapting control logic for hardware systems. I have worked with C++ and Python to build real-time data processing pipelines and communication protocols for devices like Raspberry Pi and ESP32 microcontrollers. This background in low-level system programming and hardware-software integration provides a solid foundation for developing and commissioning SPS programs.

One area that particularly interests me is adapting existing programs for retrofits and service operations. In a recent project, I built a wireless vision-aid system that required modifying object detection pipelines and streaming protocols to work reliably under different hardware configurations. This involved testing, debugging, and fine-tuning system behavior, similar to the adaptability needed when adjusting SPS programs for machine modifications.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to your projects.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
