I am writing to express my interest in the Test Job Post at Halma plc. Fortress's mission to save lives through safety solutions is meaningful work, and I appreciate the emphasis on creativity, innovation, and continuous improvement. The company's commitment to diversity, environmental sustainability, and community support aligns with my own values.

Through my professional experience as a Web Developer, I have built scalable full-stack applications using Laravel, Next.js, React, and TypeScript. I have implemented authentication systems, role-based access control, and secure payment gateways. My work includes optimizing database queries, integrating RESTful APIs, and delivering real-time features using WebSockets. These skills directly support building reliable, secure software systems.

One area that particularly interests me is the application of technology to improve safety. In my project work, I developed a Wireless Vision-Aid for the Blind system that combines YOLOv8n object detection with ultra-low latency streaming and multilingual audio feedback. This system operates fully offline with hardware costs under $15, demonstrating my ability to build practical, cost-effective solutions for real-world safety challenges.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in software engineering and safety-focused systems could contribute to Fortress's mission.

Sincerely,

Md Shahanur Islam Shagor
