I am writing to apply for the Senior DevOps Engineer role at Lemon.io. Your marketplace model connecting developers with US and European startups is an interesting approach, and I appreciate the emphasis on matching engineers with projects that fit their skills and preferences.

My technical experience includes working with AWS, Docker, Kubernetes, CI/CD pipelines, Nginx, and Linux server administration. I have deployed and maintained production applications on cloud infrastructure, set up monitoring stacks with Prometheus and Grafana, and managed containerized environments. I am comfortable working with both cloud platforms and on-premise server configurations.

One relevant example is a real-time server health monitoring dashboard I built. The system tracked availability and latency of multiple target URLs simultaneously, streaming live metrics to the browser using Socket.IO. I containerized the entire stack with Docker and Docker Compose, configured Nginx as a reverse proxy, and deployed it on a Linux server. This project required understanding of system metrics, real-time data streaming, and reliable deployment practices.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident I can contribute to Lemon.io’s projects and deliver results quickly. I have attached my CV for your review and welcome the opportunity to discuss how my background aligns with your needs.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
