I am writing to apply for the Mid Senior AI Cinematic Video Editor role at EverAI. Your work in building the world's largest AI companionship platform and your focus on safe, ethical, human-first AI is genuinely interesting. I am drawn to the challenge of creating narrative-driven, long-form video content using AI-first pipelines.

Through my research and development work in AI engineering, I have built production systems that integrate computer vision models, real-time data processing, and automated workflows. I have worked extensively with Python and YOLOv8 for object detection, and I have experience with AI image/video generation pipelines including prompting, batching, and post-processing. I am comfortable experimenting with new AI tools and models, and I enjoy the iterative process of refining outputs for quality and consistency.

A relevant example is the Wireless Vision-Aid for the Blind (WVAB) project, where I designed and built a real-time assistive system using YOLOv8n for object detection, a custom UDP streaming protocol for low-latency communication, and multilingual audio feedback. This required working end-to-end from AI model selection and optimization to hardware integration and final delivery. I maintained character and scene consistency across sequences and continuously refined the workflow for efficiency and output quality.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI engineering and system building can contribute to EverAI's creative and technical goals.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
