I am writing to express my interest in the Nurse Advice Swing Shift position at IntellaTriage. I understand that IntellaTriage is growing and that your nurses provide critical support to patients from home. While my professional background is in software engineering rather than clinical nursing, I bring strong technical skills that could support the systems and tools your nursing team relies on.

Through my work as a full-stack developer, I have built and maintained scalable web applications using Laravel, Next.js, React, and Node.js. I have experience developing secure authentication systems, role-based access controls, and real-time communication features. These skills could be valuable in maintaining and improving the digital platforms that enable your nurses to work effectively from home.

In my previous role at Explo-IT, I designed RESTful APIs, optimized database performance, and deployed applications on Linux servers using Docker and Nginx. I also implemented real-time features using WebSockets, which could support live updates and notifications in a remote care environment. I am comfortable working with modern tech stacks and ensuring systems remain reliable under concurrent usage.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
