I am writing to apply for the Junior Business Analyst position at Work Force Nexus. The opportunity to contribute to a remote team while developing my analytical skills aligns well with my current career direction.

Through my work as a full-stack developer, I have developed a structured approach to understanding requirements, analyzing data, and delivering solutions. I regularly work with MySQL and PostgreSQL databases, write queries to extract insights, and document technical workflows clearly. These skills translate directly into business analysis responsibilities such as gathering requirements, analyzing data, and supporting decision-making processes.

In my professional experience as a Web Developer at Explo-IT, I collaborated closely with stakeholders to understand project needs, translated business requirements into technical specifications, and ensured deliverables matched expectations. I also maintained clear documentation and communicated effectively across teams, which is essential for a business analyst role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical mindset and technical background can contribute to Work Force Nexus.

Sincerely,

Md Shahanur Islam Shagor
