I am writing to apply for the Lead Paid Search / SEA position at hurra.com. Your emphasis on AI, automation, and data-driven growth strategies aligns with my technical background and analytical approach to building effective systems.

Through my work as a software engineer, I have developed strong skills in automation, API integration, and data analysis. I have built systems that process data in real time, automate repetitive tasks, and generate actionable insights. This experience translates directly to modern paid search environments where automation, testing, and data-driven optimization are essential.

One area that particularly interests me is your focus on building a strong testing and learning culture. In my previous projects, I have consistently applied structured testing methodologies, from hypothesis formation to experiment execution and result analysis. I am comfortable translating strategic goals into clear priorities and ensuring resources are allocated where they create the most impact.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and will prepare the requested video introduction. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
