I am writing to apply for the Ausbildung Kaufmann/-frau fˆ…r IT-System-Management position at dostani IT GmbH. What draws me to this role is the opportunity to work at the intersection of technology and business, understanding how IT solutions are designed, priced, and delivered to customers.

Through my professional experience as a Web Developer, I have worked with a range of IT systems including Linux servers, databases, and web applications. I have experience with tools like Docker, Nginx, and cloud platforms such as AWS and Google Cloud. This technical background gives me a solid understanding of how IT infrastructure works, which I believe is a strong foundation for learning the commercial side of IT service management.

One area that particularly interests me is how software licensing and IT services are structured for different business needs. In my previous roles, I have been involved in selecting and configuring tools for projects, which has given me practical insight into how technology decisions impact costs and operations. I am eager to deepen this understanding through structured training and real customer projects.

In addition to my technical experience, I work effectively across teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments. I am organized, careful with details, and motivated to learn how IT services are managed from a business perspective.

I am looking for a hands-on training environment where I can learn from experienced professionals while contributing to real projects. The opportunity to work with a company that values personal mentorship and has strong ties to its customers is exactly the kind of setting where I can grow. I have attached my CV for your review and would welcome the chance to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
