I am writing to apply for the Werkstudent IT-Automatisierung & Prozesse position at dostani IT GmbH. As a Software Engineering student with a strong interest in automation and process improvement, I am drawn to the opportunity to actively shape and optimize your central PSA system and service workflows.

What stands out to me about this role is the emphasis on structured analysis, testing, and documentation before implementing changes. In my academic and project work, I have developed a methodical approach to understanding existing systems, identifying areas for improvement, and implementing solutions with careful validation. I am comfortable working with Linux environments, Docker, and CI/CD pipelines, which gives me a solid technical foundation to quickly learn your PSA system and ITIL-based processes.

Through hands-on project development, I have built and deployed full-stack applications where I was responsible for analyzing requirements, designing workflows, testing configurations, and documenting best practices. One relevant example is a real-time server health monitoring dashboard I developed, which involved setting up automated monitoring, live data streaming, and role-based access control. This experience taught me the importance of testing changes in a controlled environment before rolling them out to production.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my systematic thinking, curiosity, and enthusiasm for automation to your team. I have attached my CV for your review and look forward to the possibility of contributing to dostani IT.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
