I am writing to apply for the (Senior) IoT Cloud Engineer position at 1KOMMA5´°. Your mission to build the energy system of the future with Heartbeat AI and manage tens of thousands of distributed energy devices at scale is exactly the kind of infrastructure challenge I want to work on.

My technical foundation is built on cloud-native operations, distributed systems, and real-time data pipelines. I have hands-on experience with Kubernetes and Docker for container orchestration, and I have worked with Google Cloud and AWS for deploying and managing production services. I am comfortable with PostgreSQL for data modeling and have used CI/CD pipelines to automate deployments and maintain system reliability.

One area that directly connects to your IoT platform work is my experience building a real-time server health monitoring dashboard. I used Node.js, Socket.IO, and Python to stream live system metrics to the browser, built observability pipelines for logs and performance data, and deployed the entire stack using Docker and Nginx. This project required me to think about reliability, latency, and real-time data flow at the system level.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to 1KOMMA5´°s IoT platform and the broader mission of accelerating the energy transition.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
