I am writing to apply for the Senior Consultant (all genders) | IT position at Ray Sono GmbH. The role sits at the intersection of technology, architecture, and consulting, which aligns directly with how I approach software development and client engagement.

My background is in full-stack development with a focus on web technologies, cloud platforms, APIs, and software architecture. Over the past four years, I have worked across multiple client contexts, building scalable applications using Laravel, Next.js, React, TypeScript, and Node.js. I have contributed to technical concept development, technology evaluations, and architectural decisions that balance performance, maintainability, and business value.

One area that particularly interests me is the integration of AI into software solutions. I have worked on projects involving AI-powered assistants and image processing APIs, and I actively evaluate how new technologies can improve development workflows and deliver better outcomes for clients. This experience maps naturally to Ray Sono's focus on analyzing AI-driven development possibilities and modern engineering practices.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to Ray Sono's technology and service portfolio.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
