I am writing to apply for the Mid Data Analyst - Finance position at SumUp. Your focus on building scalable data models and trusted KPIs to drive commercial decision-making aligns with my experience in data-driven development and analytics.

SumUp's mission to empower small businesses with simple financial tools is something I find meaningful. The opportunity to work with global FP&A teams on strategic questions about customer lifecycle performance is exactly the kind of challenge I want to take on.

Through my professional experience, I have worked extensively with SQL, MySQL, and PostgreSQL to build robust analytical datasets and reporting layers. I have designed dashboards that track key metrics and enable stakeholders to make informed decisions. My technical foundation includes building scalable data models and defining KPIs that support commercial performance tracking.

One area that particularly interests me is translating ambiguous business questions into structured analysis and clear metrics. In previous work, I collaborated closely with cross-functional teams to understand their needs, define data definitions, and deliver actionable insights. I am comfortable working with senior stakeholders and explaining complex findings in a clear, practical way.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how I can contribute to SumUp's commercial analytics team.

Sincerely,

Md Shahanur Islam Shagor
