I am writing to apply for the Full-Stack Developer position at Cannaleo Digital GmbH. Your work on building a modern B2B platform for the German medical cannabis market is genuinely interesting. The opportunity to shape a new multi-vendor marketplace from the ground up, rather than maintaining legacy systems, is exactly the kind of challenge I am looking for.

My full-stack development experience centers on TypeScript, Node.js, React, and Next.js. I have built production web applications using these technologies, focusing on clean architecture, API design, and responsive frontends. I am comfortable working across the entire stack and making pragmatic decisions that balance code quality with delivery speed.

One area that particularly interests me is the headless commerce architecture you are building with Medusa JS or similar frameworks. Through my professional work, I have developed REST and GraphQL APIs, integrated external services, and worked with PostgreSQL for data modeling and query optimization. I have also built admin interfaces and vendor-facing dashboards using React and Next.js, which aligns directly with the frontend responsibilities of this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background can contribute to building Cannaleo’s platform.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
