I am writing to apply for the Field Reliability Engineer LATAM role at Honeycomb.io. Your work in observability and developer tools, serving companies like Slack and HelloFresh, stands out. I am drawn to the challenge of operating customer-facing managed infrastructure at scale.

My technical experience includes working with AWS, Docker, Linux, Nginx, and CI/CD pipelines to deploy and maintain production systems. I have built and managed server infrastructure, set up monitoring, and automated deployment workflows. This aligns with the platform engineering responsibilities described in the role, including managing deployments across AWS accounts and regions.

One area that particularly interests me is the ownership of customer-facing managed infrastructure. In previous work, I built a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker, which tracked availability and latency across multiple endpoints. This project involved Dockerized deployment, Nginx configuration, and live metric streaming, giving me practical experience with the kind of reliability-focused infrastructure Honeycomb manages.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to the Honeycomb team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
