I am writing to apply for the Lead Creative Strategist role at New Engen. Your approach to integrating creative, media, and analytics into performance-driven campaigns is something I find genuinely interesting, and I appreciate the focus on building work that drives measurable results.

My background is in full-stack and AI engineering, where I have spent over four years building digital products and platforms. While this role is creative and strategic rather than technical, I bring a strong understanding of how digital platforms work, how users interact with content, and how data informs better creative decisions. I have built responsive, SEO-friendly interfaces using Next.js, React, and Tailwind CSS, and I understand the technical constraints and opportunities across channels like YouTube, Instagram, and TikTok.

One area that particularly interests me is the intersection of creative strategy and performance data. In my development work, I have consistently used metrics and user feedback to refine features, optimize workflows, and improve outcomes. I am comfortable reviewing performance data, identifying patterns, and translating those insights into actionable direction for creative teams. I also have experience with Figma, which the job description mentions as a plus.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
