I am writing to apply for the Softwareentwickler Backend position at hairfree. Your company's digital transformation and the development of a modern CRM system to support your market-leading services across the DACH region is a project I find genuinely compelling.

My technical foundation is built on PHP 8 and Laravel, which I have used professionally to design and scale backend systems. I work comfortably with Laravel 12, build RESTful APIs, and handle database design and optimization across MySQL, PostgreSQL, and Redis. Writing clean, maintainable code with PHPUnit tests is part of my standard workflow.

In my professional experience as a Web Developer, I developed and maintained Laravel-based applications, integrated third-party services including payment gateways, implemented role-based access control, and optimized database queries for performance. I also worked with Docker and CI/CD pipelines to streamline deployment. This role required close collaboration with stakeholders across sales, marketing, and finance, which aligns directly with the cross-functional work described in your job description.

One area that particularly interests me is the opportunity to contribute to architectural decisions and help scale a CRM platform that serves as the digital core of the business. I have experience contributing to system architecture and enjoy working on systems where reliability, performance, and clean data modeling matter.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
