I am writing to apply for the Junior UX UI Designer role at Work Force Nexus. This position interests me because it combines user experience thinking with hands-on interface design, which aligns with how I approach building digital products.

Through my work on full-stack web applications, I have developed a strong foundation in creating responsive, accessible, and visually consistent user interfaces. I regularly use HTML, CSS, JavaScript, React, Next.js, and Tailwind CSS to turn design concepts into functional frontend code. I also work with Figma to collaborate on design prototypes and ensure alignment between visual design and implementation.

One area that particularly interests me is designing interfaces that are not only clean and modern but also performant and user-friendly across devices. In previous projects, I focused on building responsive layouts, optimizing component structure, and maintaining design consistency throughout the development process. I am comfortable iterating on designs based on user feedback and technical constraints.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in frontend development and UI design can contribute to the Work Force Nexus team.

Sincerely,

Md Shahanur Islam Shagor
