I am writing to apply for the IT-Forensiker / Analysten position at your client, a specialized cybersecurity consultancy based in the Frankfurt area. The opportunity to work alongside experienced professionals in Security Incident Response, IT forensics, and crisis management aligns closely with my academic focus and hands-on research in secure systems.

My background in Software Engineering, combined with dedicated research in cybersecurity and secure communications, has given me a solid foundation in the principles that underpin IT forensics. I have studied and worked with various operating systems including Linux, and I am familiar with network protocols, file systems, and the importance of maintaining data integrity during analysis. My work has involved identifying potential attack vectors and understanding how to isolate and secure compromised systems.

In my research on privacy-preserving frameworks for autonomous vehicle networks, I developed a decentralized security system using blockchain and advanced cryptography. This project required me to analyze communication protocols, implement tamper-proof data logging, and design systems resilient to cyber threats. I also worked on secure UAV communication protocols, where I focused on preventing spoofing, jamming, and unauthorized control. These experiences have given me practical insight into forensic methods, evidence handling, and the reconstruction of security incidents.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to contribute to your client’s mission of protecting sensitive data and systems. I have attached my CV for your review and welcome the opportunity to discuss my qualifications further.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
