I am writing to apply for the Working Student IT-Systems position at Home & Co Management GmbH. Your focus on supporting IT operations, managing cloud systems, and enabling team members to drive their own projects matches the kind of practical, hands-on work I enjoy most.

Through my professional experience as a Web Developer, I have worked extensively with Linux servers, Docker, Nginx, Apache, and cloud platforms such as AWS and Google Cloud. I have set up workstations, managed user access, deployed applications, and maintained CI/CD pipelines. These tasks have given me a solid foundation in system administration and IT operations.

One area that particularly interests me is the opportunity to take ownership of IT projects from idea to implementation. I have independently built and deployed full-stack applications, including a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker. That project involved designing the architecture, setting up the infrastructure, and ensuring reliable monitoring of multiple services.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am currently studying Software Engineering at Voronezh State University of Forestry and Technology, Russia, which keeps me connected to both academic theory and practical system design. I have attached my CV for your review and would welcome the chance to discuss how I can contribute to your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
