I am writing to apply for the PHP Backend Developer (m/w/d) â Laravel & PostgreSQL position at hairfree. Your company's digital transformation and the development of a modern CRM system that automates customer management, billing, and marketing processes is exactly the kind of project where I can contribute effectively.

My professional experience centers on PHP and Laravel development. Over the past four years, I have built and scaled web applications using Laravel 8+ and PHP 8, working extensively with relational databases, RESTful APIs, and modern backend architectures. I am comfortable with the full lifecycle of backend development, from database design and API integration to performance optimization and deployment.

In my role at Explo-IT, I developed and scaled Laravel-based platforms, built RESTful APIs, integrated payment gateways and external services, and optimized database queries using Eloquent, MySQL, and PostgreSQL. I also wrote unit tests with PHPUnit and set up CI/CD pipelines using Docker and GitHub Actions. This experience directly aligns with the responsibilities of your Laravel-based CRM platform, including system integration, database performance tuning, and collaboration with cross-functional teams.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my backend development experience can support hairfree's CRM platform.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
