I am writing to apply for the Full Stack Entwickler (m/w/d) position at FinMent GmbH. Your mission to democratize access to institutional investment strategies through technology is something I find genuinely compelling, and I would like to contribute to building the platform that makes this possible.

My professional experience as a full-stack developer has been centered on the same technologies you use: JavaScript, React, Node.js, HTML5, and CSS. Over the past four years, I have built and maintained production web applications where clean code, performance, and reliability were non-negotiable. I am comfortable working across the entire stack and taking responsibility for features from concept to deployment.

In my previous work, I developed full-stack applications that required building RESTful APIs, implementing secure authentication and role-based access control, and creating responsive, user-friendly interfaces. One relevant example is an AI-powered financial application where I built the backend using Express, TypeScript, and MongoDB, integrated OpenAI for intelligent assistants, and handled file processing and email delivery through AWS services. This project required the same kind of end-to-end ownership and technical precision that your role demands.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV and look forward to discussing how I can contribute to FinMent’s product development team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
