I am writing to apply for the Junior Webentwickler (m/w/d) position at FinMent GmbH. Your mission to democratize access to institutional investment strategies through technology is a compelling direction, and I am interested in contributing to your product development team.

My professional experience centers on full-stack web development using JavaScript, React, and Node.js. I have built production applications with Next.js and React on the frontend, paired with Node.js and Express on the backend. I work with TypeScript, HTML5, CSS, and Tailwind CSS to create clean, responsive interfaces, and I follow clean coding practices in my daily work.

In previous roles, I was involved in the full development lifecycle of web platforms. I built RESTful APIs, implemented authentication and role-based access control, optimized database queries, and developed real-time features. I also have experience deploying applications on Linux servers with Nginx and Docker, and working within agile team workflows.

One area that particularly interests me is building systems that handle data and user interactions reliably. Through my work on a full-stack personal finance platform, I designed a modular architecture with reusable components, integrated real-time updates, and implemented secure server-side authentication. This project required careful attention to performance, data integrity, and user experience.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to FinMent’s product development.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
