I am writing to apply for the IT-Administrator position at LeySelect GmbH. Your client's focus on cybersecurity, incident response, and IT forensics aligns with my technical background in Linux systems, infrastructure management, and secure system operations.

Through my professional experience, I have developed strong skills in Linux server administration and IT infrastructure support. I have worked extensively with Nginx, Apache, and Docker to deploy and maintain production systems, ensuring high availability and reliable performance. I am comfortable handling second-level troubleshooting, analyzing system errors, and resolving technical incidents both on-site and remotely.

One area that particularly interests me is maintaining stable IT operations across diverse environments. In previous work, I managed server setups, monitored system health, and optimized infrastructure for performance and security. I have experience with CI/CD pipelines, system monitoring, and ensuring that client and server landscapes run smoothly. My familiarity with Linux and web server technologies directly supports the responsibilities of this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in IT administration and system operations can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
